

Don't sacrifice application security for speed or budget.

Our Quick Check will give you a rapid security review of your application.

Is a Quick Check right for you?

Are you limited by **budget**?

Are you **unsure** if a full assessment is necessary?

Do you need a **quick** turnaround?

Do you need **more** than an automated scan?

If you answered **yes** to any of these questions, a quick check assessment might be the right approach for you. Priced at \$7,500, our Quick Checks are perfect for rapidly assessing high-level security risks.

Each **Quick Check** assessment includes:

- Static or Dynamic automated scan using commercial-grade scanners
- Review of automated scan results for false positives
- Time boxed manual testing of the most likely problem areas for your application
- Complete report on identified vulnerabilities as well as recommendations for any further testing needed
- Delivery of results direct to your Threadfix platform

What if the application needs a deeper security assessment?

Our Quick Check report helps you to identify areas of high risk where you may choose to undertake further testing. In these scenarios, you can schedule a follow-on standard assessment with credit applied for the work already performed.
